2. This was helpful for getting the cards displayed appropriately on a mobile. The centered card looks good on a computer, but the phone viewport is too small.

5. I used this to learn how to use a bootstrap class for creating a link and caption for the images I used from the web.

6. I used this to set up my contact form. <https://docs.web3forms.com/how-to-guides/html-and-javascript>

7. I used bootstrap for almost all of my formatting. This basic formatting works very well so I only have to make minor changes to the existing code.

Class examples:

1. HW #8- This homework used a lot of cards; cards are very helpful for formatting information. Also, this used a modal, so I referenced this for making my contact form.
2. Sample Form- This is the sample form we made in class, I referenced this for programming the Web3Forms.
3. I used your website to get a basic idea of how people create personal portfolio websites. <https://myslu.stlawu.edu/~kangstadt/>
